

Take data analysis to a whole new level.

With Tibco Spotfire, easily integrate and to view disparate data sets in meaningful charts, graphs and maps, making valuable insights more easily attainable.

Smarter, Faster Analytics

Integrates Spotfire with your ESRI™ Maps to deliver powerful web solutions for geospatially driven data mining and business intelligence.

From managing incidents, leaks and failures to interrogating lease data over time, map driven data analysis is intuitive and powerful.

Broadest Data Connectivity

LOGIC understands that the Oil & Gas industry has unique challenges and manages many unwieldy data sets.

For example, the ability to gain meaningful insights into your IHS global exploration data or massive land system is difficult at best. Questions like the ones below can be challenging:

- Who is leasing over time in blocks across the globe?
- Who is most effective by formation?
- How many of my leases are mapped?

With Spotfire, these trends can be visualized and understood easily.

To learn more about how to implement Spotfire and integrate your data sets and maps, please contact LOGIC.
